

Flockfeast.in — Reverse-Engineering Report

Site analysis: structure, UI, tech stack, routes, APIs & behavior — <https://flockfeast.in/>

A. Sitemap

Single-page marketing site (SPA/landing page) — no distinct routes discovered; navigation is via in-page anchors only.

Path / Anchor	Purpose
/	Home — full landing page
#services	"What We Cover" — event type gallery
#network	Partner network categories
#how	Process steps
#enquire	Lead-gen multi-step form
(implicit)	Testimonials, "Trusted By", footer / contact

No /about, /blog, /login, /vendor, or other separate pages found. No sitemap.xml / robots.txt reachable for verification (UNKNOWN — not fetchable via tooling restrictions, not confirmed absent).

B. Tech Stack

Layer	Finding	Confidence
Rendering	Static/SSR HTML single page, heavy use of anchor-in-page nav and JS-driven multi-step forms/modals	CONFIRMED (structure)
Frontend framework	Likely React/Next.js or Vue-based SPA (component pattern: horizontal card carousel, multi-step modal wizard, toast confirmations)	LIKELY, unconfirmed
CSS	Utility-based styling (Tailwind-like spacing/color patterns implied by card/badge components)	LIKELY
Images	Served from /images/*.png on own domain (not a CDN subpath like /static or _next)	CONFIRMED
Backend	Form submission backend (enquiry + vendor signup) — endpoint not observed	UNKNOWN
Hosting / CDN	Not determined (no headers inspected)	UNKNOWN
Email / contact	support@flockfeast.in, phone +91 98765 43210	CONFIRMED

C. UI / Component Breakdown

Section	Components
Navbar	Logo, links (Services, Our Network, How It Works), CTA "Get Free Quotes"
Hero	Headline, subcopy, dual CTA buttons, stat badges (200+ Venue Partners, 50+ F&B Providers, 100% Verified), two floating enquiry-card mockups (status badges: "✓ Match Found", "Live")
Services carousel	Draggable/scrollable card gallery, image + label + category tag (Social/Corporate), looped list
Our Network	7 numbered category cards (icon/number, title, description, "Explore →") + "Coming Soon" tag list
Vendor CTA	Inline mini-form: partner-type dropdown + "Request to Join →" button, success toast
Service Zones	City list (static text) + CTA link to enquiry form
The Process	4-step numbered list (Submit Brief → Source & Match → Review & Confirm → Event Day)

Section	Components
Testimonials	5 star-rated cards: quote, avatar initials, name, role/company/city
Enquiry form (main)	2-step wizard: Step 1 (Name, Work Email, Phone + honeypot field), Step 2 (Event Type grouped dropdown, Venue Type, Guest Count buckets, Food Preference checkboxes, Event Date, City) → success state
Secondary enquiry modal	Duplicate 2-step flow (popup variant), reversed field order, close (X) control
Footer	Contact email/phone, copyright, "Trusted By" logo strip (6 placeholder logos)

Interaction patterns: drag-to-scroll card carousel, multi-step form with back/continue navigation, client-side validation, success confirmation states (inline + modal), honeypot anti-spam field.

D. Feature → API/Data Map

Feature	User action	Frontend behavior	API/data	Result
Get Quotes CTA	Click hero/nav button	Scroll to #enquire	none	Form section in view
Explore event types	Drag carousel	Horizontal scroll/drag	Static image assets	Visual browse
Vendor signup	Select partner type, submit	Client validation, async POST	UNKNOWN endpoint (form POST)	"Request received" toast
Main enquiry (2-step)	Fill contact → event details → submit	Step state client-side, validation, honeypot	UNKNOWN endpoint, e.g. /api/enquiry or 3rd-party form service	"Enquiry Received!" confirmation
Modal enquiry (popup)	Same 2-step, reordered	Same as above	Same/likely same endpoint	Same confirmation

No public API endpoints were observable via passive inspection (no XHR/network calls exposed in fetched HTML/markdown).

E. Architecture

Component Tree

App

- ■ Navbar
- ■ Hero (StatBadges, FloatingCards)
- ■ ServicesCarousel (CardItem × N, looped)
- ■ NetworkGrid (CategoryCard × 7, ComingSoonTags)
- ■ VendorSignupForm
- ■ ServiceZones
- ■ ProcessSteps (Step × 4)
- ■ Testimonials (TestimonialCard × 5)
- ■ EnquiryForm (Step1 Contact, Step2 EventDetails, SuccessState)
- ■ EnquiryModal (duplicate flow, reversed order)
- ■ TrustedByLogos
- ■ Footer

Data Flow (LIKELY)

Browser → client-side form state → POST to backend/lead API or 3rd-party form service
→ backend stores lead → notifies internal sales/ops team (email/CRM)
→ confirmation rendered client-side (no visible redirect)

Backend (Inferred, Unconfirmed)

- Lightweight API (Node/Express, Next.js API routes, or serverless function) handling two form submissions
- Possibly integrates with CRM/email (e.g., SendGrid, HubSpot) — unconfirmed

Likely Database Entities (Inferred from Form Fields)

- **Lead/Enquiry:** name, email, phone, event_type, venue_type, guest_count_bucket, food_preference[], event_date, city, source_step
- **VendorApplication:** partner_type, contact info
- **Partner:** category, city, verified flag (implied by “200+ Venue Partners / 50+ F&B Providers” stats, not directly exposed)

F. Assets

Asset	Path pattern	Usage
Category images	/images/{birthday,wedding,housewarming,kitty,pyjama,hangout,brunch,anniversary,boardlunch,offsite,milestone,teamparty,mealbox,buffer,conference,yearend}.png	Services carousel cards
Logo	Not directly located (text-based “Flockfeast” wordmark likely)	Navbar/footer
Star icons	★ inline unicode (not image)	Testimonials
Avatar initials	Text-based circular badges (AM, SR, PK, RV, NS)	Testimonials, no photo images
Trusted-by logos	Placeholder “Company 1–6” (not resolved to real image URLs)	Footer strip
Fonts	Not determinable from fetched content	UNKNOWN

G. Rebuild Plan

Stack: Next.js (React) + Tailwind CSS + a form backend (Next.js API route or Formspree/Resend for email) + optional lightweight DB (Postgres/Supabase) for lead storage.

Implementation Order

- 1 Static layout: Navbar, Hero, Footer with Tailwind.
- 2 Services carousel (CSS scroll-snap + drag, or embla-carousel).
- 3 Network grid + vendor mini-form (client validation only first).
- 4 Process steps + testimonials (static data arrays).
- 5 Multi-step enquiry form component (shared between inline section and modal) with local state machine (step1/step2/success), honeypot field, client validation.
- 6 API route /api/enquiry and /api/vendor-signup → store in DB + send email notification.
- 7 Responsive polish (mobile stacking, carousel touch drag).
- 8 Deploy (Vercel) + connect domain.

H. Unknowns / Things That Could Not Be Inspected

- Actual JS framework/bundle (no script/network inspection performed).
- Real form submission endpoint(s) and anti-spam mechanism beyond the visible honeypot field.
- Hosting provider, CDN, headers, sitemap.xml/robots.txt (not fetchable due to tool URL-allowlist restriction).
- Fonts, exact color palette/hex values, and logo image.
- Whether any admin/vendor dashboard or login exists (none linked from homepage).
- Backend/database technology.

Generated via passive inspection of <https://flockfeast.in/> on 2026-09-16. All findings are evidence-based and labeled by confidence level.
